

CORERO

SECUREWATCH®

MANAGED DDoS PROTECTION SERVICES

Monitored and Managed by Corero Experts

Whether you are experienced with DDoS protection or not, Corero SecureWatch Managed Services let you outsource all or a portion of your SmartWall ONE deployment to our team of experts – so you can focus on what you do best.

SecureWatch Managed Services are a suite of configuration optimization, monitoring, and mitigation response services. Our round-the-clock service is delivered by our highly experienced security operations center and is tailored to meet the security policy requirements and business goals of each SmartWall ONE customer that engages in a SecureWatch managed service plan.

With SecureWatch Managed Services, our SmartWall ONE customers receive expert DDoS services 24 x 7 x 365, including an organization-specific implementation, round-the-clock monitoring, and immediate, effective mitigation and response in the event of an attack.

Flexible, Automatic Protection

Corero SmartWall ONE leads the industry with flexible, automatic protection that keeps DDoS attacks at bay without any of the downtime associated with other solutions.

Our platform uses a patented, innovative and automated multi-stage detection and mitigation pipeline to ensure the highest possible efficacy. Protection is achieved while maintaining line-rate performance, to ensure legitimate traffic is not impacted by damaging false-positives, or a significant increase in latency.

SecureWatch Managed Service ensures protection is up-to-date, based on the latest DDoS threat intelligence from the SecureWatch team and that all attacks are actively monitored to ensure optimal protection.

**Automatic Response**

Detection and protection in seconds, rather than the minutes taken by legacy solutions, ensuring operational continuity.

**Automatic Protection**

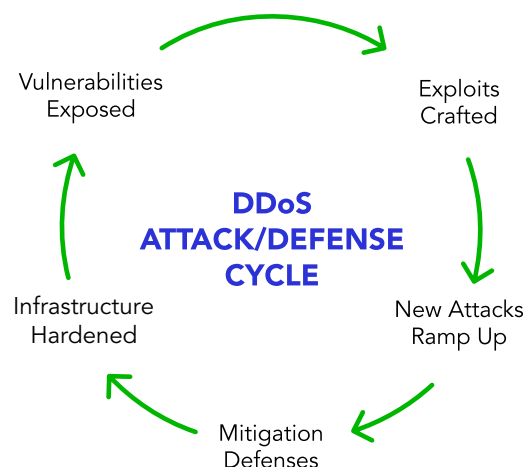

Accurate automatic protection delivers a lower TCO and enables your IT and security teams to spend more time focusing on other priorities.

**Crystal Clear Visibility**

Comprehensive reporting and alerting for actionable, intelligence on DDoS attack activity anywhere on your network.

**Highly Scalable**

Flexible and highly scalable deployment options from on-prem, hybrid, or in the cloud as dictated by your requirements.

SecureWatch Visibility

Inbound Traffic

Block Rate by Attack Vector

For all SmartWall One deployments, SecureWatch analytics shows the size, volume and type of packets in each attack, with granular visibility into every DDoS vector used, right down to the data in the packets themselves, if needed. Our SecureWatch team uses this to monitor attacks as they happen, and provide detailed analysis and reporting on each attack.

SecureWatch Services

Initial Deployment	Standard installation & deployment service
SecureWatch Maintain	Deliver ongoing upgrades and baseline policy recommendations
SecureWatch Managed	Full system and attack monitoring & reporting
Introduction Training	Online 2-hour introduction to operation & configuration training
Operation Training	2-day operation, configuration and basic analytics training
Analytics Training	1-Day detailed analytics training

About Corero Network Security

Corero Network Security is a leading provider of DDoS protection solutions, specializing in automatic detection and protection solutions with network visibility, analytics, and reporting tools. Our technology protects against external and internal DDoS threats in complex edge and subscriber environments, ensuring internet service availability.
